

A method for transferring sensitive/secure data from one user to another, or from one user to many users, in a secure (encrypted) manner across otherwise insecure infrastructures.

Secure File Exchange

Secure file exchange

USO-FX2 provides staff in subscribing schools with a secure, encrypted process for online transfers of potentially sensitive or secure information across otherwise insecure broadband infrastructures.

Full audit trail

A fundamental feature of USO-FX2 is that the movement of all documents uploaded into the transfer system is tracked via the USO account identity of both the initial document provider, and also the end recipient(s).

The file store is backed up on a nightly basis to protect against disaster or other incurred loss of current documents.

Features

- ✓ Secure method for the transfer of sensitive data
- ✓ Send files to both USO and non-USO users
- ✓ Distribute to individuals or customisable groups
- ✓ Email alerts when files are received and viewed
- ✓ An upload/download audit trail for all files
- ✓ Documents backed-up nightly
- ✓ Can be protected by Second Factor Authentication for added security
